## Answer on Question \#53757, Physics / Mechanics | Kinematics <br> Dynamics

Jed was driving his car at $40 \mathrm{~km} / \mathrm{hr}$ on a subdivision where the speed limit is $20 \mathrm{~km} / \mathrm{hr}$. He was spotted by an officer in a motorcycle, who accelerates in pursuit. By the time Jed sees the officers motorcycle it was traveling at $60 \mathrm{~km} / \mathrm{hr}$. What is the officer's velocity relative to Jed car.

## Solution:

If two objects are moving in parallel their relative velocity can be calculated.

If two objects move in same direction at different speeds we will have:

If speed of 1st object $=x \mathrm{~km} / \mathrm{hr}$ and Speed of 2 nd object $=\mathrm{ykm} / \mathrm{hr}$

Therefore, their relative speed $=(x-y) k m / h r[x>y]$, then
in our case

$$
\text { relative speed }=60-40=20 \mathrm{~km} / \mathrm{hr}
$$

Answer. $20 \mathrm{~km} / \mathrm{hr}$
