## Answer on Question \#55366, Physics / Other

Task: A ball rolls with a speed of $2.0 \mathrm{~m} / \mathrm{s}$ across a level table that is 1.0 m above the floor. Upon reaching the edge of the table, it follows a parabolic path to the floor. How far along the floor is the landing spot from the table?

## Solution:

$\mathrm{h}=\mathrm{gt}^{2} / 2, \mathrm{~h}=1.0 \mathrm{~m} ., \mathrm{g}=9.8 \mathrm{~m} / \mathrm{s}^{2}$, so time of falling the ball $\mathrm{t}=(2 \mathrm{~h} / \mathrm{g})^{1 / 2}=0.45 \mathrm{~s}$.
During that 0.45 seconds, the ball moves horizontally by a distance of
$\mathrm{S}=\mathrm{V}^{*} \mathrm{t}=(2.0 \mathrm{~m} / \mathrm{s})^{*}(0.45 \mathrm{~s})=.90 \mathrm{~m}$.
Answer: $\mathrm{S}=0.90 \mathrm{~m}$
