## Answer on question \# 55607, Physics / Optics

Question A concave mirror has a radius of 20 cm . An object is placed 30 cm in front of the mirror. Determine where the image will appear
$-4.5 \mathrm{~cm}$
$-5.5 \mathrm{~cm}$
$-6.5 \mathrm{~cm}$
$-7.5 \mathrm{~cm}$

Solution Focus distance is $f=R / 2=-10 \mathrm{~cm}$. Equation of mirror:

$$
\frac{1}{f}=\frac{1}{d_{o}}+\frac{1}{d_{i}}
$$

where $d_{o}$ and $d_{i}$ is object and image distance respectively. From this we find

$$
d_{i}=\frac{1}{1 / f-1 / d_{o}}=\frac{1}{-1 / 10-1 / 30} \approx-7.5 \mathrm{~cm}
$$
