

**Answer on** Question #59548, Physics / Mechanics | Relativity

a steel cable by which an elevator of mass 800 kg is suspended has a diameter of 2cm. the unstretched length of the suspension cable is 10 m when the elevator is on the top floor of the building. the first floor is 50 m below the top floor. find the values of extension in the cable when the elevator is on the top and on the first floor.

**Find:**  $\Delta l - ?$   $\varepsilon - ?$

**Given:**

$$l = 10 \text{ m}$$

$$m = 800 \text{ kg}$$

$$d = 2 \times 10^{-2} \text{ m}$$

$$E = 210 \times 10^9 \text{ N/m}^2$$

$$g = 9,8 \text{ N/kg}$$

**Solution:**

$$\text{Hooke's Law: } \sigma = E\varepsilon \text{ (1),}$$

where  $\sigma$  – mechanical stress,

$E$  – Young's modulus,

$\varepsilon$  – relative elongation.

$$\text{Mechanical stress: } \sigma = \frac{F_{\text{elast}}}{S} \text{ (2),}$$

where  $F_{\text{elast}}$  – elastic force,

$S$  – sectional area of the steel cable.

Elastic force numerically equal the weight of elevator:

$$F_{\text{elast}} = mg \text{ (3)}$$

Sectional area of the steel cable:

$$S = \frac{\pi d^2}{4} \text{ (4)}$$

(3) and (4) in (2):

$$\sigma = \frac{4mg}{\pi d^2} \text{ (5)}$$

$$\text{Relative elongation: } \varepsilon = \frac{\Delta l}{l_0} \text{ (6),}$$

where  $\Delta l$  – absolute elongation,

$l_0$  – initial length of cable.

Absolute elongation:

$$\Delta l = l - l_0 \text{ (7),}$$

where  $l$  – the final length of cable

$$(7) \text{ in } (6): \varepsilon = \frac{l-l_0}{l_0} \quad (8)$$

$$(8) \text{ in } (1): \sigma = E \times \frac{l-l_0}{l_0} \quad (9)$$

$$\text{Of } (5) \text{ and } (9) \Rightarrow \frac{4mg}{\pi d^2} = E \times \frac{l-l_0}{l_0} \quad (10)$$

$$\text{Of } (10) \Rightarrow 4mgl_0 = E\pi d^2(l-l_0) \quad (11)$$

$$\text{Of } (11) \Rightarrow l_0(4mg + E\pi d^2) = E\pi d^2 l \quad (12)$$

$$\text{Of } (12) \Rightarrow l_0 = \frac{E\pi d^2 l}{(4mg + E\pi d^2)} \quad (13)$$

$$\text{Of } (13) \Rightarrow l_0 = 59,9929 \text{ m} \quad (14)$$

$$(14) \text{ in } (7): \Delta l = 0,0071 \text{ m} \quad (15)$$

$$(14) \text{ and } (15) \text{ in } (6): \varepsilon = 0,02\%$$

**Answer:**

$$\Delta = 7,1 \text{ mm}$$

$$\varepsilon = 0,02\%$$
