## Answer on Question \#60205-Physics-Mechanics-Relativity

A person aiming to reach exactly opposite point on the bank of a stream is swimming with a speed of 0.5 $\mathrm{m} / \mathrm{s}$ at an angle of 120 degree with the direction of the flow of the water. The speed of water in the stream is
(1) $0.25 \mathrm{~m} / \mathrm{s}$
(2) $0.5 \mathrm{~m} / \mathrm{s}$
(3) $1.0 \mathrm{~m} / \mathrm{s}$
(4) $0.433 \mathrm{~m} / \mathrm{s}$

## Solution

Here, $V_{r}$ is the velocity of the river w.r.t. ground, $V_{m}$ is the velocity of the man w.r.t. river, V the velocity of the man w.r.t. ground.

$$
\begin{gathered}
\tan 90=\frac{V_{m} \sin 120}{V_{r}+V_{m} \cos 120} \\
V_{r}=-V_{m} \cos 120=-(0.5)(-0.5)=0.25 \frac{\mathrm{~m}}{\mathrm{~s}}
\end{gathered}
$$

Answer: (1) $0.25 \mathrm{~m} / \mathrm{s}$.
