Answer on Question\# 61084 --Physics -- Astronomy -- Astrophysics The distance modulus of a star is $\mathbf{- 0 . 1}$. At what distance is it from the earth?

## Answer:

$$
\mu=-0.1
$$

We have that the in parsecs

$$
\begin{aligned}
& \log _{10} d=1+\frac{\mu}{5} \\
& d=10^{0.98} p c=9.55 p c \\
& 1 p c=206265 \text { a.u. } \\
& d=9.55 p c=1969815 \text { a.u. }
\end{aligned}
$$
