## Answer on Question \#66893-Physics-Mechanics-Relativity

A balloon is rising at a constant velocity of $3 \mathrm{~m} / \mathrm{s}$. While the balloon is rising, something falls off. It takes 3 s to hit the ground. What is the velocity when they hit the ground? How high was the balloon?

## Solution

The initial velocity of the something is $3 \mathrm{~m} / \mathrm{s}$.

$$
v_{f i n a l}=v_{0}-g t=3-10(3)=-27 \frac{\mathrm{~m}}{\mathrm{~s}}
$$

The negative sign means that it falls downwards.

$$
\begin{gathered}
h_{f \text { final }}=h_{0}+v_{0} t-\frac{g t^{2}}{2}=0 \\
h_{0}=\frac{g t^{2}}{2}-v_{0} t=\frac{10(3)^{2}}{2}-(3)(3)=36 \mathrm{~m}
\end{gathered}
$$

Answer: $-27 \frac{m}{s} ; 36 m$.
