

Answer on Question #67001-Physics-Other

A simple harmonic motion is represented by

$$x(t) = a \cos \omega t$$

Obtain expressions for velocity and acceleration of the oscillator. Also, plot the time variation of displacement, velocity and acceleration of the oscillator.

Solution

The velocity is

$$v(t) = \frac{dx}{dt} = -a\omega \sin \omega t$$

The acceleration of the oscillator is

$$a(t) = \frac{dv}{dt} = -a\omega^2 \cos \omega t$$

The plot of the time variation of displacement, velocity and acceleration of the oscillator for $a = 1, \omega = 1$:
