## Answer on Question \#67622, Physics / Other

A FORCE OF 15 NEWTON ACT ON A BODY OF MASS 5 KG FOR 2 SECONDS .WHAT IS THE CHANGE IN VELOCITY OF THE BODY?

Solution:
The acceleration is

$$
a=\frac{F}{m}=\frac{15 \mathrm{~N}}{5 \mathrm{~kg}}=3 \mathrm{~m} / \mathrm{s}^{2}
$$

Also, the acceleration is given by

$$
a=\frac{v_{f}-v_{i}}{t}=\frac{\Delta v}{t}
$$

Thus, the change in velocity is

$$
\Delta v=a t=\left(3 \mathrm{~m} / \mathrm{s}^{2}\right) \times(2 \mathrm{~s})=6 \mathrm{~m} / \mathrm{s}
$$

Answer. $6 \mathrm{~m} / \mathrm{s}$
