## Answer to Question \#68435

Question: A ball is left from the top of a building. A window is in the building the ball is cross the window in 0.5 second. The length of the window is 3 meter. If the speed of the ball at the top of the window is Vt and the bottom of the window is $\mathrm{Vb}(\mathrm{g}=9.8)$ then which option is right $=$ $1 . \mathrm{Vt}+\mathrm{Vb}=12$ meter per second
$2 . \mathrm{Vt}-\mathrm{Vb}=4.9$ meter per second
3.VtVb=1 meter per second
$4 . \mathrm{Vb} / \mathrm{Vt}=1$ meter per second

## Solution:

If the ball crosses the window in 0.5 s then we can write

$$
\begin{gathered}
\frac{g t^{2}}{2}+V_{t} t=l \\
\frac{9.8 * 0.5^{2}}{2}+V_{t} * 0.5=3 \\
V_{t}=3.55 \frac{\mathrm{~m}}{\mathrm{~s}}
\end{gathered}
$$

The velocity at the bottom of the window

$$
V_{b}=V_{t}+g t=3.55+9.8 * 0.5=8.45 \frac{\mathrm{~m}}{\mathrm{~s}}
$$

So

$$
V_{b}+V_{t}=3.55+8.45=12 \frac{\mathrm{~m}}{\mathrm{~s}}
$$

The correct answer is 1 .
