## Answer on Question \#68525Physics / Other

Two forces $\mathbf{A}$ and $\mathbf{B}$ are 6 N at $36^{\circ}$ to the positive x -axis and 7 N along the negative x -axis respectively. Calculate:

1) magnitude of $\mathbf{A}+\mathbf{B}$ is?
2) the direction of $\mathbf{A}+\mathbf{B}$.
3) the magnitude of $\mathbf{A}-\mathbf{B}$.

## Solution:

1) The magnitude of $\mathbf{A}+\mathbf{B}$ is

$$
|\mathbf{A}+\mathbf{B}|=\sqrt{\left(6 \cos 36^{\circ}-7\right)^{2}+\left(6 \sin 36^{\circ}\right)^{2}}=4.1 \mathrm{~N}
$$

2) The direction of $\mathbf{A}+\mathbf{B}$ is

$$
\begin{gathered}
(\mathbf{A}+\mathbf{B})_{x}=6 \cos 36^{\circ}-7 \\
(\mathbf{A}+\mathbf{B})_{y}=6 \sin 36^{\circ} \\
\tan \varphi=\frac{(\mathbf{A}+\mathbf{B})_{y}}{(\mathbf{A}+\mathbf{B})_{x}}=\frac{6 \sin 36^{\circ}}{6 \cos 36^{\circ}-7}=-1.64, \quad \varphi=\arctan (-1.64)=-58.6^{\circ}
\end{gathered}
$$

Vector $\mathbf{A}+\mathbf{B}$ is directed at angle $\varphi=58.6^{\circ}$ to the negative x -axis.
3) The magnitude of $\mathbf{A}-\mathbf{B}$ is

$$
|\mathbf{A}-\mathbf{B}|=\sqrt{\left(6 \cos 36^{\circ}+7\right)^{2}+\left(6 \sin 36^{\circ}\right)^{2}}=12.4 \mathrm{~N}
$$

## Answers:

1) $|\mathbf{A}+\mathbf{B}|=4.1 \mathrm{~N}$
2) $58.6^{\circ}$ to the negative $x$-axis
3) $|\mathbf{A}-\mathbf{B}|=12.4 \mathrm{~N}$
