

### Answer on Question #68707 Physics / Electromagnetism

Four charges are situated in the corner of a square ABCD if a charge  $q$  is kept in the center of this square, then what will be the force on charge  $q$ ?

#### Solution:

From the symmetry of square follows that magnitude of electric field in the center of square is zero. So the force on charge  $q$  is zero too.

**Answers:** force on charge  $q$  is equal to zero.
