

Answer on Question #37719 - Programming –Java

```
public class MyClass {

    static char arr[][] = {{'l', 'l'}, {'k', 'k', 'f'}, {'g', 'g', 'g', 'g', 'g', 'g'}};

    static int getNum(int n) {

        int num = 0;

        for (int i = 0; i < arr.length; i++) {

            if (n == arr[i].length) {

                num = i+1;

            }

        }

        return num;

    }

    public static void main(String args[]) {

        System.out.println(getNum(2)); // must print 1

        System.out.println(getNum(3)); // must print 2

        System.out.println(getNum(6)); // must print 3

    }

}
```
