

Answer on Question#38075- Programming, C#

1. Hayley has started the application development. She needs to ensure that the application meets

the following requirements:

When the application starts, it should display a message asking the user to enter either option d or v. The application should execute the following actions for the two options:

- d: The application should display the file extension of the stock details.
- v: The application should open the stock details file in the read-only mode and display its contents.

Write the code snippet that Hayley should use to implement the desired functionality in the application

Solution.

Some times we may have to make file readonly programatically.

To make readonly.....

```
foreach (string fileName in System.IO.Directory.GetFiles(path))
{
    System.IO.FileInfo fileInfo = new System.IO.FileInfo(fileName);

    fileInfo.Attributes |= System.IO.FileAttributes.ReadOnly;
    // or
    fileInfo.IsReadOnly = true;
}
```

To change attribute readly only false

```
foreach (string fileName in System.IO.Directory.GetFiles(configFilePath))
{
    System.IO.FileInfo fileInfo = new System.IO.FileInfo(fileName);
    if(fileInfo.IsReadOnly==true)
        fileInfo.IsReadOnly = false;
}
```
