

Answer on Question#38482 - Programming – Other

- 1) First of all you need to add statusStrip and timer to the main panel.
- 2) Then add toolStripStatusLabel into statusStrip.
- 3) The last step is to turn the timer on and set tick event for it.

```
private: System::Void timer1_Tick(System::Object^ sender, System::EventArgs^ e)
{
    statusStrip1->Items[0]->Text=DateTime::Now.ToShortDateString()+" "+
    DateTime::Now.ToShortTimeString()+":"+DateTime::Now.Second;
}
```
