

```
//Answer to Question #39045, Programming, C++

#include <iostream>
#include <stdlib.h>
using namespace std;

int main()
{
    float a[12] = { 55, 56, 61, 57, 89, 54, 66, 67, 51, 59, 69, 62 }, s = 0, d;
    int k;
    cout << endl << "enter the farm from 1 to 12: ";
    cin >> k;
    k--;
    cout << "The cost of the product : " << a[k] << endl;

    for (int i = 0; i<12; i++)
        s = s + a[i];
    d = s / 12;

    cout << "The average cost of the products : " << d << endl;

    system("Pause");
}
```
