

Answer on Question#39109 - Programming – C++

```
#include <iostream>
#include <stdlib.h>
using namespace std;

#define A 14.95
#define T 10.25
#define R 8.75
#define H 25.99

int main()
{
    char c;

    cout << "Input shipping method (a,t,r,h): ";

    c = cin.get();

    cout << "The shipping rate is: ";

    switch (c)
    {
        case 'A':
        case 'a':
            cout << A;
            break;
        case 't':
        case 'T':
            cout << T;
            break;
        case 'r':
        case 'R':
            cout << R;
            break;
        case 'h':
        case 'H':
            cout << H;
            break;
        default:
            cout << "you've inputted wrong shipping method";
            break;
    }
    cout << '\n';
    system("PAUSE");
}
```
