

How Standard Checkout works

The Standard Checkout flow consists of 6 steps:

- ① After selecting products to purchase, your customer chooses to pay with PayPal. Customers can also choose to use your existing checkout for credit card payments.
- ② Your customer is transferred to PayPal's secure site (HTML redirect).
- ③ Your customer logs in to their account and reviews their shipping and billing information. Your customer clicks **Pay** to make their payment, which is processed instantly.
- ④ Your customer reviews their payment confirmation at PayPal.
- ⑤ Your customer is automatically redirected to your site (HTML redirect).
- ⑥ Your customer arrives at the order confirmation screen on your website. You are notified of a successful payment via email, [Instant Payment Notification](#), or [Payment Data Transfer](#).
