Answer on Question #37731, Programming, AJAX

Below is the code for simple html page with script you have asked. The actual code is between <script></script> tags we have marked it bold. We have binded the function to `document.onload` event, you are free to change event to any other.

```html
<!DOCTYPE html>

<html>

    <head>

        <title></title>

        <meta http-equiv="Content-Type" content="text/html;
charset=UTF-8">

    <script>

        window.onload=function(){

         var weight=prompt('Enter you weight in pounds,
please',100)

if (weight>=130 && weight<=250){

    alert('You are allowed in the contest')

}

else

    {

        alert('You are NOT allowed in the contest')

    }

        }

        </script>

    </head>

    <body>

        <div>TODO write content</div>

    </body>

</html>
```
