

```
//Answer on Question #38556, Programming, Java
import java.util.Scanner;

public class ConvertHeightFeet {
    //main function
    public static void main(String[] args) {
        //Scanner for input
        Scanner input =new Scanner(System.in);
        double heightincm;//variable for heightincm
        double heightinfeet;//variable for heightinfeet
        double heightinches;//variable for heightinches
        System.out.print("Enter height in cm: ");//prompt user to enter
height in cm
        heightincm=input.nextDouble();//read height in cm
        heightinfeet=0.0328084*heightincm;//calculate heightinfeet
        heightinches=0.393701*heightincm;//calculate heightinches
        //show result
        System.out.println("Enter height in feet: "+heightinfeet);
        System.out.println("Enter height in inches: "+heightinches);
    }
}
```
