

Answer on Question #46966 - Programming, Java | JSP | JSF

1. Use Java code to write a function that converts an array of Strings to an array of integers.

Example:

arr = {"40", "50", "70"}

to arr = {40,50,70}.

Solution.

```
public int[] convertsArray(String[] strArr) {  
    int[] iArray=new int[strArr.length];  
    for(int i=0; i<strArr.length; i++) {  
        iArray[i] = Integer.parseInt(strArr[i]);  
    }  
    return iArray;  
}
```
