

## Answer on Question #48021, Programming, Java | JSP | JSF

### Problem.

Give an example of a program fragment in which the same name is used to describe two different variables.

### Solution.

```
public class Test {  
    private String name;  
  
    public String getName() {  
        return name;  
    }  
  
    public void setName(String name) {  
        this.name = name;  
    }  
}
```
