Answer on Question #48048 – Programming – C++

```cpp
#include <iostream>
using namespace std;
int main()
{
        double distance;
        double speed;
        cout << "Enter the distance travel: " << endl;
        cin >> distance;
        cout << endl;
        cout << "Enter speed: "<<endl;
        cin >> speed;
        cout << endl;
        double TotalTime;
        TotalTime = distance / speed;
        cout << "Total time is: " << TotalTime << endl;
        system("pause");
        return 0;
}
```

```
            ┌─────────────────┐
            │      Begin       │
            └─────────────────┘
                     │
                     ▼
         ┌──────────────────────┐
         │ Enter distance and speed │
         └──────────────────────┘
                     │
                     ▼
         ┌──────────────────────┐
         │ TotalTime=distance/speed │
         └──────────────────────┘
                     │
                     ▼
         ┌──────────────────────┐
         │   Output TotalTime    │
         └──────────────────────┘
                     │
                     ▼
            ┌─────────────────┐
            │       End        │
            └─────────────────┘
```
