

Question #53626, Programming, Perl, for completion

Write the following expression using a shortcut:

`$y = $y + 5;`

Answer:

A screenshot of a terminal window on a Windows system. The window title is 'Perl'. The command entered is 'perl' followed by a script. The script initializes a variable \$y to 0, enters a loop that increments \$y by 5 and prints the value of \$y on each iteration, and ends with a Ctrl-Z character. The output shows the values 5, 10, 15, 20, 25, 30, and 35, each on a new line. The terminal prompt 'C:\>' is visible at the bottom.

```
C:\>perl
$y=0;
while (<>>) {
    $y=$y+5;
    print "$y\t$_";
}
^Z
5
10
15
20
25
30
35
^Z
C:\>
```
