

Name driver: Marvell Yukon 88E8001/8803/8010 PCI Gigabit Ethernet Controller

You actions:

1. You can try to use the Windows Update to install the driver provided by Microsoft official site. Please check the link: <https://www.asus.com/support/faq/1013327> for further instruction.
2. If Windows can't find a driver for your device, you can look for a driver on the device manufacturer's website. Please check the link: <https://www.marvell.com/support/downloads/search.do>
3. And the last option is google search for line "asus P4P800 network drivers windows 10". In the search results, select, for example: <http://www.driverscape.com/manufacturers/asus/laptops-desktops/p4p800se/8677>. Select type of OS and see chapter "Network & Wireless Drivers".
